From Water and Environment
Services to Stakeholders

- **A network of professionals listed in a directory**
  4,000 members representing a wide diversity of professionals and specialists: local authorities, government departments, R&D offices, companies, research laboratories, etc.
- **A monthly magazine: TSM (Techniques, Sciences and Methods)**
  Designed for environment and sustainable development stakeholders, TSM is disseminated to members in 70 countries.
  The magazine publishes the results of studies led by specialists belonging to ASTEE's committees, commissions and working groups, as well as external papers.
- **Publications**
  See above ("Concrete Results")
- **An annual congress**
  Casablanca 2003 – Aix-les-Bains 2004 – Paris 2005 – Deauville 2006 – Barcelona 2007 – Nîmes 2008 – Nice 2009 – Strasbourg 2010 – Manosque 2011 – Marseilles 2012 – Nantes 2013
- **Conferences**
  with a national and international scope
- **Technical days and visits to different sites**
  Organised throughout the year by our 13 regional chapters, these events provide scientists and practitioners with the opportunity to meet up hence fostering better communication between specialists.

Technical days and visits to different sites

ASTEE is represented across France allowing it to share and promote specific local characteristics and issues.

Association of water and environment specialists working for sustainable development

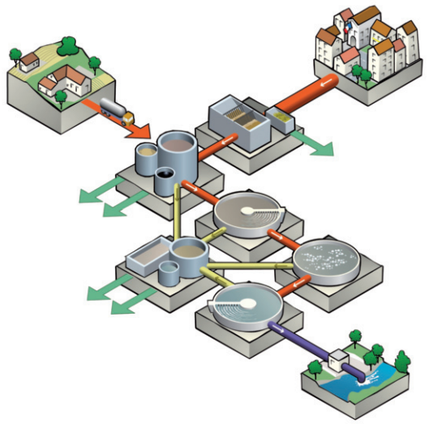

www.astee.org

An Association dedicated to Environment

Created in 1905, ASTEE is a scientific and technical association working on public services issues, in relation to environment and health. It brings together experts, researchers, scientists and practitioners as well as representatives of public and private organisations working in different sectors related to the environment.

Our mission

Our aim is to act as a think tank exploring the multiple methodological, technical and regulatory issues related to the management of urban services dealing with drinking water, sanitation, air quality, noise pollution and energy resources.

ASTEE is qualified to put forward recommendations and bring them to the attention of public authorities and is recognised to be of public interest.
It constantly provides advice and decision-making support to all stakeholders involved in sustainable development, elected officials as well as their technical staff. To this end, ASTEE works in partnership with French associations of local authorities (ACUF, AMF, ADF) and their technical civil servants (AITF and ATTF).

ASTEE is the French representative of ISWA (International Solid Waste Association), IWA (International Water Association), EWA (European Water Association) and EUROCORR (European Committee on Corrosion).
ASTEE relies on a flexible and efficient internal organisation. Its 2 committees and 6 scientific and technical commissions specialised in different sectors supervise 45 working groups in charge of exploring and working out specific issues. Those may relate to research, public health, processes and equipment as well as regulation, standardisation or urban planning. The results of these studies are published in articles in the TSM magazine or in ASTEE technical publications.

The French Water Partnership (FWP), created in 2007, provides a platform for French water specialists and NGO's working at the international level. It currently gatheres 100 organisations. The FWP acts as a discussion forum for the governance and management of water resources, aiming to place water on the international agenda and to keep policy makers focused on water challenges, notably on the Millennium Development Goals. The FWP was initiated and is still supported by ASTEE.

Committees and Commissions

- Sanitation Commission
- Network Corrosion and Protection Commission
- Waste and Cleanliness Commission
- Drinking Water Commission
- Water Resources and Aquatic Environments Commission
- Urban Services, Environments and Sustainable Development Commission
- European and International Affairs Committee
- Research Committee

ASTEE PROVIDES LOCAL AUTHORITIES WITH TECHNICAL SUPPORT FOR WATER, SANITATION AND WASTE MANAGEMENT

Know-How for effective Results

Since its creation, ASTEE has built its reputation by organising series of events (conferences, symposia, scientific and technical days, etc.) and through a number of publications. Focusing on water, sanitation and waste, these works are today used as a reference by specialists and public authorities. Some of ASTEE's English publications:

- **Quantification of greenhouse gas emissions** from water and sanitation services (available in English and French),
- **Improving the performance of water and sanitation public services** (available in English and French).
Published for the 6th World Water Forum in Marseille, this book meets the overall aim of the forum dedicated to "solutions". Indeed, this book summarizes the work of an international working group led by ASTEE; it brings together nearly forty technical and institutional solutions that have enabled authorities in charge of providing a public water and/or sanitation service to improve their performance.
