ASTEE Technical publications

Association of water and environment specialists working for sustainable development

Created in 1905, ASTEE is the French scientific and technical association working on public services issues in relation to environment and health. It brings together 3800 members: experts, researchers, scientists and practitioners, as well as representatives of public and private organisations.

ASTEE is the French representative of ISWA (International Solid Waste Association), IWA (International Water Association), EWA (European Water Association) and EUROCORR (European Committee on Corrosion).

ASTEE's activities relies on 2 committees and 6 commissions specialised in different sectors and supervising 45 working groups in charge of exploring and working out specific issues. Those may relate to research, public health, processes and equipment as well as regulation, standardisation or urban planning. The results of these studies are published in articles in the TSM magazine or in ASTEE technical publications.

Methodoly Guide for evaluating Greenhouse Gas (GhG) emissions by water and sanitation services

CHAP.1: GhG emissions evaluation protocols

CHAP.2: Accounting rules and principles for evaluating GhG emissions by water and sanitation services

CHAP.3 : GhG sources and emission factors specific to the water and sanitation sector

CHAP.4 : Subjects specific to the water professions requiring further investigation

CHAP.5 : Communication of results

Improving performance of water and sanitation public services

This book presents a large number of examples of performance improvement in water services in various contexts. They are meant to encourage the reflections of the stakeholders involved in the governance of these essential services, to be template for further implementation in other contexts or to contribute to building innovative solutions.

Urban planning and urban services: the essential alliance

The link between urban public services and urban planning should be obvious in modern cities. However, it comes most of the time with a bunch of issues and difficulties, both in the designing and in the building of urban policies.
This publication was issued for the ASTEE 2013 congress in order to shed light on the main issues that were discussed about during the congress. It gathers written contributions from scientists, professionals and experts in the field of cities and services. This document includes thoughts, testimonies and experiences that show the real need to make engineers and urban planners working together for "sustainable and responsible cities". It also includes proposals that may improve this link.
